Higher levels of consciousness vibrate at higher frequencies with a repeating pattern of Body, Mind, and Spirit, making up the parts of a higher design.

Levels of Consciousness

The vital electric and magnetic fields which surround and interpenetrate the human body are filled with vibration at many frequencies. Is this just random noise? Or is it an aspect of consciousness at different levels of awareness?

The Infratonic 8 features 3 effective frequency bands to relieve pain and promote healing.

Our latest release, the **Infratonic 8**, offers unprecedented effectiveness and comfort. It provides three new healing signals, the first for invigorating subcellular activity (**Body**), the second for breaking up intracellular trauma (**Mind**), and the third for activating cellular intuition (**Spirit**). This edition of the **CHI Newsletter** is devoted to the science behind this new technology.

Frequencies of Healing:

Body, Mind, and Spirit

CHI research is uncovering a fascinating window into the nature of human consciousness, which involves layer within layer of frequency bands, each with its own conscious function. By infusing the body with certain parts of these frequency bands, we can accelerate recovery and expand human potential.

Our main focus has been on physical healing, and this is why we have been concentrating on the frequency bands of the physical consciousness; the cells of our bodies, which when combined, make up our internal organs, nerves, and brain. There are other levels.

Dr. Valerie Hunt's research as described in her book "Infinite Mind – the Science of Human Vibration", provides a view of higher levels of human consciousness. She correlated electrical frequencies of the body, as measured by EMG, with emotional states of test subjects and colors seen by clairvoyants, and found that the frequencies ranging between about 200 Hz. and 2000 Hz. correlated with emotional consciousness. She identifies three bands: the physical

band, below 200 Hz., the emotional band, 200 to a few thousand Hz., and what might be called a collective unconscious or higher mental band, above tens of thousands of Hz., through which creative inspiration flows to inspire new scientific breakthroughs and inspired works of art. These three bands might be the Body, Mind, and Spirit of the consciousness of humanity.

While the mind and spirit of humanity are not to be discounted, the work of CHI has primarily focused on the lowest of these three bands, the physical "body" of the human cell. This work started with the discovery that natural healers around the world, when they intend to heal, often emit a signal in the range of 8 to 14 Hz.

Further research indicated that this range, known as the Alpha range to EEG researchers, acts a bridge between two other ranges, the Theta range (4-8 Hz) associated to our physical lives, our attachment to who we are, and the Beta range (13-40 Hz), our mental lives, or the way we think our lives should be. When these two views of our lives (the physical and the mental), do not mesh,

Continued on page 2

we are miserable. (Note: at a cellular level, when these two frequency bands do not communicate, healing is stalled.) By infusing Alpha we find that the Theta and Beta patterns are gradually replaced by an Alpha pattern, and that the test subject is likely to let go of destructive attachments and expectations, and find a middle road which allows moving forward in life. Many have described their first treatment with the **Infratonic** as a life-changing experience both physically and mentally, which opens doors of opportunity which they did not perceive before. On the cellular level muscles relax, inflammation subsides, pain dissipates, and healing accelerates.

Alpha is not the only therapeutic signal. Over the years several researchers have asked us to produce an **Infratonic** which infuses Theta. We have tried it, but have not found it to be therapeutically effective.

The Transition Between Mind and Heart

In studying the frequency of a cat's purring, **CHI** researchers expected to find Alpha signals. Instead, we found a higher frequency band, in the range of 25 to 40 Hz. Searching for this band, we found that it is the sound produced by the human heart! While this band did not appear to be particularly therapeutic in our tests, we made some odd discoveries:

If subjects were treated with the SMR (Sensory Motor Range) band

between 13 and 17 Hz, they typically became obsessed with cleaning up their desks and finding fault with the organization of others. Perhaps this band has applications in a therapy device, but we couldn't figure it out. (It might get teenagers to clean up their rooms, but it might also make their parents stop smoking, eating meat, or watching idiotic TV shows.)

Bridging these two gaps to establish a "continuity of consciousness" between physical, analytical, and intuitive consciousness, is a fundamental healing mechanism of the **Infratonic 8's Spirit** signal.

Why does Infratonic treatment effect us on both the conscious level and the cellular level?

On the level of the physical body, we are nothing more than billions of cells all talking to each other (often harmoniously!). The brain and nervous system, which we use for our analytical thinking, are just a bunch of nerve cells which have agreed to cooperate together. Since our physical consciousness is the group consciousness of our cells, the frequencies of the **Infratonic 8**, when applied to groups of cells, affect our entire physical consciousness.

3 Vitalizing Frequencies

We then tried the band between SMR and the heart, 17 to 25 Hz. Results were astounding. Sensitive people would feel spinning above their heads, some saw auras more clearly, while others felt increased healing energy flowing through them. It appears that just as alpha provides a bridge between our physical and analytical consciousness, this new frequency band, 17-25 Hz, provides a bridge between analytical consciousness and heart consciousness, between logic and intuitive knowing.

While this new frequency band may not have a specifically medical application by itself, it has proven to be quite valuable when combined with Alpha.

Subcellular Vitality

Just as our cells appear to have a Body-Mind-Spirit, and our human consciousness, according to Dr. Hunt, has a Body-Mind-Spirit, we developed another signal in the Delta range which stimulates subcellular metabolic activity the way alpha acts on intracellular activity. This is a frequency band around 2 Hz.

Intuitive bodyworkers have been very enthusiastic about the deep cellular work of our Body signal which includes both our Delta signal and our Alpha signal. The next article (on page 3) is exemplary of what they have been reporting.

Feedback on the Body - Mind - Spirit of the Infratonic 8

by Esther - Intuitive Bodyworker

I find that it works well to treat my clients first by using **Body**, then **Mind**, then **Spirit**. It is effective to sweep slowly from head to foot, slowly topping wherever blockage is sensed:

Body really does get the cells activated. It breaks loose very deep physical/cellular stuff. When using the body setting it seems to work best by moving the transducer very slowly, as the physical stuff which it breaks loose moves very slowly. If you're moving long and you run into *really thick tuff**, stop there for several seconds to give the stuff more time to loosen up.

Mind breaks up trauma between cells. And **Spirit** harmonizes the entire field. It heals breaks and tears in the etheric web (aura). (Unless my client is into spirit, I just talk about physical tuff.)

It's rather like **Body** acts as a spot remover, **Mind** is an area cleaner, and **Spirit** brings the entire body into harmony again.

To get other perspectives, I asked three of my more intuitive clients to evaluate the three signals of the **Infratonic 8**. I started sweeping for a

* *really thick stuff* -

While this term may be obvious to an intuitive bodyworker, for some, more explanation is necessary. A headache, sometimes felt as heaviness or grogginess, is an example of really thick stuff with which most everyone can identify. This same stuff might build up in the myofascial tissue and, in extreme cases, create fibromyalgia. It might collect in the legs and feet and create poor circulation, numbness, pain, and degeneration. It can collect

in the lower lumbar or upper back and be the source of chronic spinal problems.

This "really thick stuff" does not seem to be the intracellular trauma which causes inflammation, but rather sub-cellular programming which causes slowing of cellular metabolism, thus reduced nerve transmission and lymph flow, and encouraging degeneration. The **Body** signal breaks up this sub-cellular sluggishness.

Comprehensive **CHI** Training in **Infratonic Therapy™** for Bodyworkers

- Learn specialized techniques for fibromyalgia, edema, diabetes, MS, and problems of the elderly.
- Identify and resolve somatic congestion from old emotional issues for increased muscle flexibility for enhanced athletic performance and accelerated healing.
- Break through armored protection to access core issues more easily.
- Vitalize the bodyworker for greater joy of life both during and after work.
- Explore the healing power of the **Infratonic 8** and the **CHI Vitalizer**.
- Network at an Infratonic Users Group Meeting.
- Course notes, Certificate of Completion, and ABMP CEUs.

Taught by: Bob Cole, popular internationally certified Somatic Therapist and Instructor.

April 13-14: Saturday 9-5, Sunday 8-2 \$ 195

few minutes with the **Body** signal, then a few minutes with **Mind**, and finished up with a few minutes sweeping with **Spirit**. Here's how they described the three signals:

Client #1 - Body: This client felt pockets of congestion or disturbance blowing up, like the discharge of dynamite. **Mind:** Felt polarity, a pulling up and down, as if acting on a connected polarity field from head to toe. **Spirit:** Felt like heightened awareness, an awakening of the interface between body and etheric, as if the nerve endings were connecting to the fine filaments of the nadis.

Client #2 - Body: Felt like blockages in the lower extremities were opening. Felt pulses from the lower

extremities to upper, and opening of the sinuses. **Mind:** Felt like movement of energy during Qigong exercises. Felt emotions coming up and clearing.

Spirit: Felt balanced and more integrated.

Client #3: - Body: Felt like body wounds were healing. Pulling energy into the physical body. A sensation like pulling taffy, a pulling together. **Mind:** Fanned out like rays of energy from the body. Spreading, externalization.

Spirit: Balanced all bodies together. Spirit seemed to harmonize the body.

After a short treatment with **Body**, **Mind**, and **Spirit**, my clients are much more receptive. They feel more aligned. This is a great tool for bodyworkers who are sensitive to energies.

Q: Why did you name the three buttons “BODY, MIND, and SPIRIT” ?

This was a difficult decision. There is so little room on the front panel of the **Infratonic 8** that we would need to write in teeny tiny letters if we included more than one small word. And we wanted to say more than just “1, 2, and 3” because that would tell you almost nothing. What we wanted to say is in the chart to the right.

Signal #1 is clearly a physical healing phenomenon, and “**Body**” seemed to fit.

Signal #2 is a tough concept for mainstream medicine because the idea that cells can be traumatized and hereby learn dysfunctional behavior like inflammation, simply does not fit into the biochemical paradigm in which cell behavior is fixed and can be controlled by pharmaceuticals. That the **Infratonic** signal can dissipate intracellular trauma is another long reach. “**Mind**” reminds users that this signal restores normal communication between cells.

Signal #3 is really a tough one. Not only does the function of this signal indicate that cells can learn behavior from other cells, but that a particular frequency can stimulate cells to intuitively learn new ways of coping with a difficult situation. “Intuition” was too long, so we selected “**Spirit**”.

3 Vitalizing Signals

of the New Infratonic 8

Body - invigorates sub-cellular activity.

Mind - dissipates intracellular trauma.

Spirit - opens cells to intuitive learning.

Body-Mind-Spirit seemed to describe these signals perfectly....as long as you remember that this is from the perspective of the cell.

How do I satisfy patients who expect a mainstream device?

We now have a new machine, the **Infratonic SE**, an all-white model, that looks medical in appearance, and makes no allusions to consciousness. “At last, an **Infratonic** which doesn’t raise eyebrows!” Thus, whether you believe that the cells of our bodies are pre-programmed, programmable, or conscious, we have the right **Infratonic** for you.

How do I know the Spirit signal awakens intuition?

Find someone who is faced with what they consider to be a hopeless situation and note (in writing) how they are coping with it. Treat them with the **Spirit** signal for ten minutes on the chest or a point of discomfort and ask them to think about their situation. After ten minutes, ask them what options they have in their situation, and how they feel about it. You are likely to find that they have new insights, new approaches, or a new found acceptance or appreciation for the situation. In some cases, their sense of hopelessness will have vanished entirely.

OUR MISSION:

We are dedicated to educating healthcare providers about the importance of human vital energy in health and patient recovery.

We believe an understanding of the energetic nature of healing will reduce side effects and medical costs.
